Roozz Plugin for cross-platform & cross-browser Support.

License per app you publish US\$ 995 / year
Server hosting included

Beta

Ideal for maximum CPU and GPU Performance.
Faster = less energy usage, longer battery time, less wait, wait, wait

Ideal for copy right protection of media files.

License per app you publish US\$ 9995 / year
Server hosting included

Beta

Roozz Supports:

Roozz is a middleware technology that enables easy cross platform distribution of software applications. On Windows, Linux, Mac, ChromeOS and WindowsMobile, Roozz is implemented as a browser plugin similar to Flash and Silverlight, but it is different in that it integrates, payment, copyright protection and it allow developers to use many different programming languages such as C#, VB.NET, C++, Assembler.

The 3 major advantages of the Roozz technology are: Payment, Speed and cross-platform.

Roozz allows developers to create programs in Visual Studio, which is the most popular IDE, and publish them on the web in less than 5 minutes (no new skills needed). Roozz solve payment, copyright protection and updating automatically.

Roozz allows most existing .exe applications to run inside the browser including most 3D game-engines. (you don't need to reprogram your 2D or 3D game to distribute it on the web)

Roozz combines cross-platform application development with easy distribution and optimal speed. C# is one of the most productive and popular programming languages and in most cases it run faster than JavaScript, Java, Flash and Silverlight.
